

havelock instant security grilles

What makes Havelock so strong? The secret of the Havelock design is that the strength is not dependent on the lock. It has a unique self-locking panel. Any force applied to the welded mesh causes the system to lock even more securely against its side channels. Havelock has been tested in Denmark by SKAFOR, the Danish Insurance Association where it achieved a "blue" rating. In the UK the HAVELOCK I is a licensee of the ACPO Secured by Design programme and has the right to use the term "Police Preferred Specification".

- Physical Deterrent
